Georgia Secretary of State Brad Raffensperger had been hiding this report from the public for two years.

University of Michigan Professor of Computer Science and Engineering J. Halderman and Security Researcher and Assistant Professor at Auburn University Drew Sringall collaborated on the report where they discovered many exploitable vulnerabilities in the Dominion Voting Systems' ImageCast X system.

Far-left Georgia Judge Amy Totenberg sealed and covered up the results of the investigation of Dominion voting machines in Georgia and sat on the report for two years until its release this week.

The report confirms that votes can be altered in the Dominion voting machines. In fact, the report reveals that the Dominion software is vulnerable and can be hacked.

On Thursday VoterGA founder Garland Favorito joined Steve Bannon on The War Room to discuss the findings from the explosive report.

Trump-hating Secretary of State Raffensperger hid this information from the public until now. Why is that?

[Halderman Report on Georgi...](#) by [Jim Hoff](#)

Professor Halderman wrote about his findings in a blog post on Wednesday.

Back in September 2020, the Court **granted** the *Curling* Plaintiffs access to one of Georgia's touchscreen ballot marking devices (BMDs) so that they could assess its security. Drew and I extensively tested the machine, and **we discovered vulnerabilities in nearly every part of the system** that is exposed to potential attackers. **The most critical problem we found is an arbitrary-code-execution vulnerability that can be exploited to spread malware from a county's central election management system (EMS) to every BMD in the jurisdiction.** This makes it possible to attack the BMDs at scale, over a wide area, without needing physical access to any of them.

Our report explains how attackers could exploit the flaws we found to change votes or potentially even affect election outcomes in Georgia, including how they could defeat the technical and procedural protections the state has in place. While we are not aware of any evidence that the vulnerabilities have been exploited to change votes in past elections, without more precautions and mitigations, there is a serious risk that they will be exploited in the future.

On Thursday Professor Halderman tweeted out that Georgia Secretary of State Brad Raffensperger will not install Dominion's security patches before the 2024 election.

TGP Stats

Astonishingly, Georgia Secretary of State Brad Raffensperger, who has been aware of our findings for two years, just announced that the state will not get around to installing Dominion's security patches until after the 2024 Presidential election.  <https://t.co/bnPXoP6Xc2>

— J. Alex Halderman (@jhalderm) [June 14, 2023](#)

This was taken from a recent [Raffensperger statement](#).

The office also announced that there will be pilots of the recently Election Assistance Commission-certified version of Democracy Suite, 5.17, in 2023. This software has not been deployed in any election in any jurisdiction as of yet. The pilots will examine its full functionality in a real-world setting. Also, in reviewing the processes it will require an update of the nearly 45,000 pieces of voting equipment, along with the subsequent acceptance testing. This process will take tens of thousands of manhours. Therefore, the statewide move to 5.17 will occur following the 2024 election cycle. This will allow the state and counties to focus on executing municipal elections and running the Presidential cycle. It also allows the state to put together a thoughtful, thorough plan to roll out the latest software.

Raffensperger, a vocal Never-Trumper, has been aware of the investigators' findings for two years!

That means Raffensperger, as Georgia's Secretary of State, ran the vulnerable machines during his reelection in 2022!

What is up with Brad Raffensperger?

Our friend **DC Draino** reposted our Georgia elections report on Twitter on Friday with a warning to Georgians – **YOU NEED TO FIX THIS!**

From ABC: University of Michigan computer scientist J. Alex Halderman spent 12 weeks examining the ImageCast X voting machines used statewide in Georgia and by at least some voters in more than a dozen other states. His report was filed with the court and kept under seal for...

pic.twitter.com/lzYUYCfxPX

– DC_Draino (@DC_Draino) **June 16, 2023**

Actually, the machines need to be tossed.

You can build most of a city skyscraper in 17 months

But GA SOS Raffensperger doesn't believe that's enough time to install security patches to fix GA voting machines from being hacked before the 2024 election

This is criminal & it must be stopped

Georgians needs to fight hard <https://t.co/2ca0dbTU8Q>
